NOTIFICATION DATE	DELIVERY MODE
07/09/2008	ELECTRONIC

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

docketing@hamiltonterrile.com
seaton@hamiltonterrile.com
tmunoz@hamiltonterrile.com

-- *The MAILING DATE of this communication appears on the cover sheet with the correspondence address* --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.
- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) ☒ Responsive to communication(s) filed on *4-15-08*.
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) ☒ Claim(s) *1-20* is/are pending in the application.
    4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) *1-20* is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) ☐ The specification is objected to by the Examiner.
10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
    a) ☐ All b) ☐ Some * c) ☐ None of:
      1. ☐ Certified copies of the priority documents have been received.
      2. ☐ Certified copies of the priority documents have been received in Application No. _____.
      3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) ☒ Notice of References Cited (PTO-892)

6) ☐ Other: _____.

DETAILED ACTION

Office Action Summary

1.   This **Non-Final Office Action** is responsive to the amendment of 15 April 2008.

Response to Amendments

2.   The Claim objections to Claims 6 and 7 are withdrawn.

Response to Arguments

3.   The applicant's arguments have been fully considered but are not persuasive.

4   The applicant argues with respect to Claim 1 and 11 regarding the official notice

regarding a freight claim engine. The applicant attempts to traverse the official notice.

The examiner respectfully points out to the applicant that the rejection showed

how the various functionalities in the claim are taught by the reference of Joao. What is

not explicity taught is a single processor that performs the claimed functionalities.

Actually the concept of a single processor to provide a particular functionality is taught

within the Joao reference itself (see Figure 1, central processing computer). Also,

since Joao teaches various computers providing the claimed functionalities (see the

processors of Figure 1), having one computer (i.e. engine) performing the various

functions of several does not patentability distinguish the claims from the cited

references ((In re Larson, 340 F.2d 965, 968, 144 USPQ 347, 349 (CCPA 1965)).

5.   The applicant challenges the taking of Official Notice on page 6 in respect to

Claim 11 regarding "using one or more predetermined factors to identify delivery reports

as freight claims". The applicant has failed to properly challenge the taking of Official

Notice as to why this is old and well known in the art. As such, the improper and

untimely challenge thus constitutes admitted prior art. Nonetheless, the examiner

provides the following reference substantiating the Official Notice:

"A longitudinal assessment of EDI use in the U.S. motor carrier industry"

Michael R Crum, Deborah A Johnson, Benjamin J Allen. Transportation Journal. Lock

Haven: Fall 1998. Vol. 38, Iss. 1; pg. 15, 14 pgs

6.   The applicant argues with respect to Claim 18 that the cited references fail to

teach "automatically rebuilding the products associated with a response of lost or

damaged".

        The examiner respectfully disagrees.

        The rejection is made over a combination of references. The examiner's position

is that at least Hancock suggests rebuilding the orders once an order is deemed lost or

damaged. Hancock teaches a supply chain network of nodes. In column 10 line 19-23,

Hancock teaches that if orders (i.e. shipments since in the context of Hancock, orders

are tied to shipments being made from one node to another - See Figure 1) are not

executed, i.e. the orders are lost, then the system regenerates those orders (i.e. this is

rebuilding the orders, i.e. re-executing them). The limitation of automatic is met by the

electronic nature of the network of nodes taught by Hancock - the transmission of an

order to, for example, the source node indicates that the order is automatically rebuilt,

since Hancock teaches that the source node includes manufacturing plants (see column

3 line 55). The examiner notes that even assuming arguendo that the cited references

did not teach performing the claimed rebuilding being performed automatically, the fact

that the rebuilding is at least taught by Hancock would not distinguish over the

rebuilding being performed automatically, since it is well settled that automating

something performed manually does not convey patentability (*In re Venner*, 262 F.2d

91, 95, 120 USPQ 193, 194 (CCPA 1958).

Claim Rejections - 35 USC § 101

7.   35 U.S.C. 101 reads as follows:

> Whoever invents or discovers any new and useful process, machine, manufacture, or composition of
> matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and
> requirements of this title.

Claims 11-20 are rejected under 35 U.S.C. 101 based on Supreme Court

precedent, and recent Federal Circuit decisions, the Office's guidance to examiners is

that a § 101 process must (1) be tied to another statutory class (such as a particular

apparatus) or (2) transform underlying subject matter (such as an article or materials) to

a different state or thing. Diamond v. Diehr, 450 U.S. 175, 184 (1981); Parker v. Flook,

437 U.S. 584, 588 n.9 (1978); Gottschalk v. Benson, 409 U.S. 63, 70 (1972); Cochrane

v. Deener, 94 U.S. 780,787-88 (1876).

An example of a method claim that would not qualify as a statutory process

would be a claim that recited purely mental steps. Thus, to qualify as a § 101 statutory

process, the claim should positively recite the other statutory class (the thing or product)

to which it is tied, for example by identifying the apparatus that accomplishes the

method steps, or positively recite the subject matter that is being transformed, for

example by identifying the material that is being changed to a different state.

Here, applicant's method steps, fail the first prong of the new Federal Circuit

decision since they are not tied to another statutory class and can be performed without

the use of a particular apparatus. Thus, **Claims 11-20** are non-statutory since they may

be performed within the human mind.

Claim Rejections - 35 USC § 103

8.   The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set
> forth in section 102 of this title, if the differences between the subject matter sought to be patented and
> the prior art are such that the subject matter as a whole would have been obvious at the time the
> invention was made to a person having ordinary skill in the art to which said subject matter pertains.
> Patentability shall not be negatived by the manner in which the invention was made.

9.   This application currently names joint inventors. In considering patentability of

the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

the various claims was commonly owned at the time any inventions covered therein

were made absent any evidence to the contrary. Applicant is advised of the obligation

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

not commonly owned at the time a later invention was made in order for the examiner

to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or

(g) prior art under 35 U.S.C. 103(a).

10.   Claims 1 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Joao (U.S. Pub. No. 2002/0099567 A1).

Regarding to claim 1, Joao discloses the invention substantially as claimed.

Joao discloses a system for automated freight claim management of freight deliveries

(i.e. shipment information) (paragraph [0002], lines 1-2, paragraph [0010], lines 1-2), the

system comprising: a customer interface (i.e. receiver computer) (paragraph [0010],

lines, 4) operable to accept delivery reports (i.e. insurance claims) from customers

(paragraph [0187], lines 1-6); a central processing computer operable to automatically

process the delivery reports to identify freight claims (i.e. insurance claims) (paragraph

[0034], lines 1-5, paragraph [0104], lines 1-5), a logistics service provider interface (i.e.

sender or shipping computer) (paragraph [0010], lines 3-4) operable to communicate

freight claims (i.e. insurance claim) to the logistics service provider and to receive (i.e.

transmit and/or receive) logistics service provider responses (paragraph [0017], lines 1-

7, paragraph [0187], lines 1-6); wherein the central processing computer is further

operable to process logistics service provider responses (i.e. carrier) to resolve freight

claims (paragraph [0034], lines 1-5). However, Joao does not explicitly disclose a

freight claim engine that provides the claimed functionality. It is common knowledge in

the prior art for a central processing computer (i.e. freight claim engine) to provide the

functionality of the claimed invention to operate the system. Therefore, it would have

been obvious to one having ordinary skill in the art at the time the invention was made

for the system of Joao to include a freight claim engine operable to automatically

process the delivery reports to identify freight claims, wherein the freight claim engine is

further operable to process logistics service provider responses to resolve freight

claims. The motivation for doing so would have been for the central processing

computer (i.e. freight claim engine) to drive/automate the functionality of automatically

processing the delivery reports to identify freight claims, wherein the freight claim

engine is further operable to process logistics service provider responses to resolve

freight claims.

Regarding to claim 11, Joao discloses the invention substantially as claimed.

Joao discloses a method for automated freight claims management of freight deliveries

(i.e. shipment information) (paragraph [0002], lines 1-8), the method comprising:

receiving delivery reports (i.e. information) from customers (paragraph [0187], lines 1-6);

identifying delivery reports as freight claims (paragraph [0035], lines 3-8), automatically

communicating (i.e. transmit) freight claims to a logistics service provider associated

with the freight deliveries (paragraph [0017], lines 1-7); receiving responses to the

freight claims from the logistics service provider (i.e. sender) (paragraph [0017], lines 1-

7) and automatically resolving the freight claims according to the logistic service

provider responses (paragraph [0034], lines 1-5). However, Joao does not explicitly

disclose using one or more predetermined factors to identify delivery reports as freight

claims (i.e. insurance claims). It is common knowledge in the prior art to use

predetermined factors to identify delivery reports as freight claims (i.e. insurance

claims). Therefore, it would have been obvious to one having ordinary skill in the art at

the time the invention was made for the method of Joao to include the feature of

identifying delivery reports as freight claims (i.e. insurance claims) by one or more

predetermined factors. The motivation for doing so would have been to identify the

information (i.e. delivery reports) as freight claims in order to resolve the freight claims

according to the logistics service provider responses.

11.   Claims 2 and 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable

over Joao (U.S. Pub. No. 2002/0099567 A1) in view of Hancock et al. (U.S. Pat. No.

6,785,718 B2).

    Regarding to claims 2 and 4, Joao discloses the invention substantially as

claimed. Joao discloses providing a notification of a lost or found shipment (i.e. off-track

shipment/mis-delivered shipment) (paragraph [0029], lines 1-6). However, Joao does

not disclose wherein the freight claim engine is further operable to resolve freight claims

by automatically generating a re-delivery order for logistics service provider responses

of lost freight (as per claim 2) and wherein the freight claim engine is further operable to

resolve freight claims by automatically precluding a re-delivery order for logistics service

provider responses of found freight (as per claim 4). Hancock et al. discloses reviewing

orders to identify discrepancies and addressing the discrepancies by canceling or

rescheduling the orders (column 10, lines 19-22). Therefore, it would have been

obvious to one having ordinary skill in the art at the time the invention was made to

combine the system of Joao with the feature of wherein the freight claim engine is

further operable to resolve freight claims by automatically generating a re-delivery order

for logistics service provider responses of lost freight (as per claim 2) and wherein the

freight claim engine is further operable to resolve freight claims by automatically

precluding (i.e. canceling) a re-delivery order for logistics service provider responses of

found freight (as per claim 4) as taught by Hancock et al., as both Joao and Hancock et

al. are directed to the system for automated freight claim management of freight

deliveries. The motivation for doing so would have been to generate a re-delivery order

for lost freight and precluding a re-delivery order for found freight.

Regarding to claim 5, Joao and Hancock et al. discloses the invention

substantially as claimed. However, Joao and Hancock et al. do not explicitly disclose

an accounting engine interfaced with the freight claims engine and operable to track

payment balances to the logistics service provider based on the identified freight claims

and the logistics service provider responses. Joao discloses a database containing

various electronic payment information, credit card account information, financial

account information, etc. (paragraph [0127], lines 1-11). Therefore, it would have been

obvious to one having ordinary skill in the art at the time the invention was made for the

system of Joao and Hancock et al. to include an accounting engine interfaced with the

freight claims engine and operable to track payment balances to the logistics service

provider based on the identified freight claims and the logistics service provider

responses as taught by Joao, as both Hancock et al. and Joao are directed to the

system for automated freight claim management of freight deliveries. The motivation for

doing so would have been to track payment balances based on the identified freight

claims and the logistic service provider responses.

Regarding to claim 6, Joao and Hancock et al. discloses the invention substantially as claimed. However, Joao does not disclose wherein the logistics service provider interface comprises an EDI communications interface. Hancock et al. discloses connecting interfaces (i.e. nodes) using Electronic Data Interchange (EDI) (column 5, lines 43-46). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the system of Joao with the feature of wherein the logistics service provider interface comprises an EDI communications interface as taught by Hancock et al., as both Joao and Hancock et al. are directed to the system for automated freight claim management of freight deliveries. The motivation for doing so would have been to reduce the cost of using paper documents to transfer information/data.

12.   Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Joao (U.S. Pub. No. 2002/0099567 A1) in view of Hancock et al. (U.S. Pat. No. 6,785,718 B2) and further in view of Campbell et al. (U.S. Pub. No. 2004/0030572 A1).

Regarding to claim 3, Joao and Hancock et al. discloses the invention substantially as claimed. However, Joao and Hancock et al. do not disclose a response time engine interfaced with the freight claim engine and operable to assign a response of lost freight to a freight claim if the logistics service provider fails to respond to the freight claim in a predetermined time. Campbell et al. discloses triggering an alarm if the delivery is not picked up or delivered within accepted periods of time (paragraph [0057], lines 13-19, paragraph [0081], lines 15-17). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to

combine the system of Joao and Hancock et al. with the feature of a response time

engine interfaced with the freight claim engine and operable to assign a response of lost

freight to a freight claim if the logistics service provider fails to respond to the freight

claim in a predetermined time as taught by Campbell et al., as Joao and Hancock et al.

and Campbell et al. are directed to the system for automated freight claim management

of freight deliveries. The motivation for doing so would have been to assign a response

of lost freight if the logistic service provider fails to respond to the freight claim in a

predetermined time.

13.   Claims 7, 8 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable

over Joao (U.S. Pub. No. 2002/0099567 A1) in view of Wiesenmaier (U.S. Pub. No.

2002/0120533 A1).

Regarding to claims 7, 8 and 12, Joao discloses the invention substantially as

claimed. However, Joao does not explicitly disclose wherein the deliveries comprise

built to order products (as per claim 7) and wherein the built to order products comprise

information handling systems (as per claims 8 and 12). Wiesenmaier discloses

delivering built to order (i.e. made-to-specification) products (paragraph [0003], lines 1-

3). It is also common knowledge in the prior art for built to order products to include

information handling systems in order to customize the information handling system

according to an individual or organization's specifications. Therefore, it would have

been obvious to one having ordinary skill in the art at the time the invention was made

to combine the system and method of Joao with the feature of wherein the deliveries

comprise built to order products (as per claim 7) and wherein the built to order products

comprise information handling systems (as per claims 8 and 12) as taught by

Wiesenmaier, as both Joao and Wiesenmaier are directed to the system and method for

automated freight claim management of freight deliveries. The motivation for doing so

would have been to deliver freight consisting of built to order products, wherein the built

to order products comprise information handling systems.

13.   Claims 9, 10, 13, 15-20 are rejected under 35 U.S.C. 103(a) as being

unpatentable over Joao (U.S. Pub. No. 2002/0099567 A1) in view of Wiesenmaier

(U.S. Pub. No. 2002/0120533 A1) and further in view of Hancock et al. (U.S. Pat. No.

6,785,718 B2).

Regarding to claim 9, Joao and Wiesenmaier discloses the invention

substantially as claimed. However, Joao and Wiesenmaier do not disclose an

information handling system order validation engine associated with the freight claims

engine and operable to compare information associated with freight claims with one or

more required information fields to identify and intercept deficient freight claims from

communication to the logistics service provider. Hancock et al. discloses comparing

and updating purchase orders (column 10, lines 4-8 and 13-15) and running an error log

report to identify any undefined information (column 10, lines 29-31). Therefore, it

would have been obvious to one having ordinary skill in the art at the time the invention

was made to combine the system of Joao and Wiesenmaier with the feature of an

information handling system order validation engine associated with the freight claims

engine and operable to compare information associated with freight claims with one or more required information fields to identify and intercept deficient freight claims from communication to the logistics service provider as taught by Hancock et al., as Joao, Wiesenmaier and Hancock et al. are all directed to the system for automated freight claim management of freight deliveries. The motivation for doing so would have been to validate built to order product orders and intercept deficient freight claims.

Regarding to claim 10, Joao and Wiesenmaier discloses the invention substantially as claimed. However, Joao and Wiesenmaier do not disclose wherein the freight claims engine generates re-delivery orders for deficient freight claims. Hancock et al. discloses generating re-delivery orders (i.e. rescheduling) for orders that have discrepancies and those that were not executed (column 10, lines 19-22). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the system of Joao and Wiesenmaier with the feature of wherein the freight claims engine generates re-delivery orders for deficient freight claims as taught by Hancock et al., as Joao, Wiesenmaier and Hancock et al. are all directed to the system for automated freight claim management of freight deliveries. The motivation for doing so would have been to re-deliver orders for deficient freight claims.

Regarding to claims 13, Joao discloses the invention substantially as claimed. Joao discloses providing a notification of a lost or found shipment (i.e. off-track shipment/mis-delivered shipment) (paragraph [0029], lines 1-6). However, Joao does not disclose automatically initiating re-delivery of an information handling system identified as lost by a logistics service provider response; and automatically precluding

re-delivery of an information handling system identified as found by a logistics service provider. Hancock et al. discloses reviewing orders to identify discrepancies and addressing the discrepancies by canceling or rescheduling the orders (column 10, lines 19-22). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the method of Joao with the feature of wherein automatically resolving the freight claims further comprises: automatically initiating re-delivery (i.e. rescheduling) of an information handling system identified as lost by a logistics service provider response; and automatically precluding re-delivery (i.e. canceling) of an information handling system identified as found by a logistics service provider as taught by Hancock et al., as both Joao, Wiesenmaier and Hancock et al. are directed to the method for automated freight claim management of freight deliveries. The motivation for doing so would have been to generate a re-delivery order for lost freight and precluding a re-delivery order for found freight.

Regarding to claim 15, Joao and Wiesenmaier discloses the invention substantially as claimed. However, Joao and Wiesenmaier do not disclose validating freight claim information before sending freight claims to the logistics service provider; and initiating re-delivery of information handling systems associated with an invalid freight claim. Hancock et al. discloses comparing and updating purchase orders (column 10, lines 4-8 and 13-15), running an error log report to identify any undefined information (column 10, lines 29-31) and generating re-delivery orders (i.e. rescheduling) for orders that have discrepancies and those that were not executed (column 10, lines 19-22). Therefore, it would have been obvious to one having ordinary

skill in the art at the time the invention was made to combine the method of Joao and Wiesenmaier with the feature of validating freight claim information before sending freight claims to the logistics service provider; and initiating re-delivery of information handling systems associated with an invalid freight claim as taught by Hancock et al., as Joao, Wiesenmaier and Hancock et al. are all directed to the method for automated freight claim management of freight deliveries. The motivation for doing so would have been to validate freight claim information and to initiate re-delivery orders for invalid freight claim.

Regarding to claim 16, Joao, Wiesenmaier and Hancock et al. discloses the invention substantially as claimed. However, Joao, Wiesenmaier and Hancock et al. do not explicitly disclose tracking payment balance based on the identified freight claims and the logistics service provider responses; and communicating the payment balances to a financial institution associate with payments to the logistics service provider for the deliveries. Joao discloses a database containing various electronic payment information, credit card account information, financial account information, etc. (paragraph [0127], lines 1-11) and communicating the information (paragraph [0125], lines 1-7, paragraph [0128]). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made for the method of Joao, Wiesenmaier and Hancock et al. to include tracking payment balance based on the identified freight claims and the logistics service provider responses; and communicating the payment balances to a financial institution associate with payments to the logistics service provider for the deliveries as taught by Joao, as Wiesenmaier,

Hancock et al. and Joao are directed to the method for automated freight claim management of freight deliveries. The motivation for doing so would have been to track and communicate payment balances based on the identified freight claims and the logistic service provider responses.

Regarding to claim 17, Joao, Wiesenmaier and Hancock et al. discloses the invention substantially as claimed. However, Joao and Wiesenmaier do not disclose wherein communicating freight claims and balances further comprises sending EDI messages. Hancock et al. discloses connecting interfaces (i.e. nodes) using Electronic Data Interchange (EDI) (column 5, lines 43-46). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the method of Joao and Wiesenmaier with the feature of wherein communicating freight claims and balances further comprises sending EDI messages as taught by Hancock et al., as Joao, Wiesenmaier and Hancock et al. are directed to the method for automated freight claim management of freight deliveries. The motivation for doing so would have been to reduce the cost of using paper documents to transfer information/data.

Regarding to claim 18, Joao discloses the invention substantially as claimed. Joao discloses a method for manufacturer management of freight claims (i.e. insurance claims), the method comprising (paragraph [0002], lines 1-2, paragraph [0034]):; providing the products to a logistics service provider for delivery of each product to a location associated with a customer (i.e. receiver) (paragraph [0059], paragraph [0180], lines 1-2); receiving freight claims (i.e. insurance claims) from customers for failure of the logistics service provider to deliver products (paragraph [0187], lines 1-6);

automatically communicating the freight claims to the logistics service provider

(paragraph [0193], lines 1-6), receiving responses (i.e. information) of the logistics

service provider to freight claims (paragraph [0017], lines 1-7, paragraph [0187], lines 1-

6) and providing a notification of a lost or found shipment (i.e. off-track shipment/mis-

delivered shipment) (paragraph [0029], lines 1-6). However, Joao does not explicitly

disclose freight claims (i.e. insurance claims) associated with delivery of build to order

products by a logistics service provider, accepting orders from plural customers for

products to be built to a customer-ordered configuration; building the products;

automatically re-building the products associated with a response of lost or damaged;

and precluding the re-building of products associated with a response of found.

Wiesenmaier discloses delivery of build to order products (i.e. made-to-specification)

(paragraph [0003], lines 1-3), accepting orders form plural customers for products to be

built to a customer-ordered configuration (paragraph [0048], lines 5-7), building (i.e.

creating) the products (paragraph [0048], lines 8-9, paragraph [0113], lines 5-6).

Hancock et al. discloses reviewing orders to identify discrepancies and addressing the

discrepancies by canceling or rescheduling the orders (column 10, lines 19-22).

Therefore, it would have been obvious to one having ordinary skill in the art at the time

the invention was made to combine the method of Joao with the feature of freight claims

(i.e. insurance claims) associated with delivery of build to order products by a logistics

service provider, accepting orders from plural customers for products to be built to a

customer-ordered configuration; building the products; automatically re-building the

products associated with a response of lost or damaged; and precluding the re-building

of products associated with a response of found as taught by Wiesenmaier and Hancock et al., as Joao, Wiesenmaier and Hancock et al. are directed to a method for manufacturer management of freight claims associated with delivery of build to order products by a logistics service provider. The motivation for doing so would have been to re-build lost or damaged products and precluding re-building of found products.

Regarding to claim 19, Joao, Wiesenmaier and Hancock et al. discloses the invention substantially as claimed. However, Joao, Wiesenmaier and Hancock et al. do not explicitly disclose validating that the location associated with freight claims matches the location provided to the logistics service provider for the products. Joao discloses verifying that a shipment is being delivered to the proper receiver (paragraph [0031], lines 1-4). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the method of Wiesenmaier and Hancock et al. with the feature of validating that the location associated with freight claims matches the location provided to the logistics service provider for the products as taught by Joao, as Wiesenmaier, Hancock et al. and Joao are directed to the method for manufacturer management of freight claims associated with delivery of build to order products by a logistics service provider. The motivation for doing so would have been to validate that a shipment is being delivered to the proper receiver associated with the freight claims.

Regarding to claim 20, Joao, Wiesenmaier and Hancock et al. discloses the invention substantially as claimed. However, Joao, Wiesenmaier and Hancock et al. do not explicitly disclose wherein the products comprise information handling systems.

Wiesenmaier discloses delivering built to order (i.e. made-to-specification) products

(paragraph [0003], lines 1-3). It is common knowledge in the prior art for built to order

products to include information handling systems in order to customize the information

handling system according to an individual or organization's specifications. Therefore, it

would have been obvious to one having ordinary skill in the art at the time the invention

was made to combine the method of Joao with the feature of wherein the products

comprise information handling systems as taught by Wiesenmaier, as both Joao,

Hancock et al. and Wiesenmaier are directed to the method for manufacturer

management of freight claims associated with delivery of build to order products by a

logistics service provider. The motivation for doing so would have been to deliver

freight consisting of build to order products, wherein the build to order products

comprise information handling systems.

14. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Joao

(U.S. Pub. No. 2002/0099567 A1) in view of Wiesenmaier (U.S. Pub. No.

2002/0120533 A1) in view of Hancock et al. (U.S. Pat. No. 6,785,718 B2) and further in

view of Campbell et al. (U.S. Pub. No. 2004/0030572 A1).

Regarding to claim 14, Joao, Wiesenmaier and Hancock et al. discloses the

invention substantially as claimed. However, Joao, Wiesenmaier and Hancock et al. do

not disclose tracking response times between freight claim communications to logistics

service providers and logistics service provider responses; and assigning a logistics

service provider response of lost if a predetermined response time lapses. Campbell et

al. discloses triggering an alarm if an acknowledgement of delivery is not received and if

the delivery is not picked up or delivered within accepted periods of time (paragraph

[0057], lines 13-19, paragraph [0081], lines 5-12 and 15-17). Therefore, it would have

been obvious to one having ordinary skill in the art at the time the invention was made

to combine the method of Joao, Wiesenmaier and Hancock et al. with the feature of

tracking response times between freight claim communications to logistics service

providers and logistics service provider responses; and assigning a logistics service

provider response of lost if a predetermined response time lapses as taught by

Campbell et al. as Joao, Wiesenmaier, Hancock et al. and Campbell et al. are directed

to the method for automated freight claim management of freight deliveries. The

motivation for doing so would have been to assign a response of lost freight if the

logistic service provider fails to respond to the freight claim in a predetermined time.

Conclusion

15.   The prior art made of record and not relied upon is considered pertinent to

applicant's disclosure.
